

## Shell programming sederhana.

1. Buat direktori terlebih dahulu lalu masuk ke dalam direktori tersebut.

```
~/Documents > mkdir contohFileSh  
~/Documents > cd contohFileSh
```

2. Buat file yang diberi format .sh

```
~/Documents/contohFileSh > nano hello.sh
```

3. Ubah mode file menjadi executable

```
~/Documents/contohFileSh > chmod +x hello.sh  
~/Documents/contohFileSh > ls -l  
total 0  
-rwxr-xr-x 1 qistirahmahtillah staff 0 Feb 12 14:10 hello.sh
```

4. Tulis kode output & input ke dalam file hello.sh tersebut

```
echo "Nama saya Qisti Rahmahtillah"  
  
echo "siapa namamu? "  
read name  
echo "salam kenal" $name  
|
```

5. Jalankan program kemudian hasilnya akan seperti tampilan di bawah ini

```
~/Documents/contohFileSh > ./hello.sh  
Nama saya Qisti Rahmahtillah  
siapa namamu?  
Alfa  
salam kenal Alfa  
~/Documents/contohFileSh > |
```

## File perintah logika sederhana

```
~/Documents/contohFileSh > touch logika.sh  
~/Documents/contohFileSh > chmod +x logika.sh
```

```
~/Documents/contohFileSh > nano logika.sh
```

```
echo "masukan password anda:"  
read password  
  
if [ $password == wonderlabs ]; then  
    echo "password benar"  
else  
    echo "password salah"  
fi  
|
```

```
~/Documents/contohFileSh > ./logika.sh  
masukan password anda:  
wonderlabs  
password benar  
~/Documents/contohFileSh > |
```

```
masukan password anda:  
wonder  
password salah  
~/Documents/contohFileSh > |
```
